

Paracetamol Treatment Nomogram

Mass Units mg/L are now used. New critical level at four hours is 150mg/L

- Treat ALL patients with serum paracetamol levels above the nomogram treatment line
- A single nomogram treatment line is recommended.
- This line has been lowered by 25% from standard lines to take into account:
 - Potential for minor error estimating the time of ingestion
 - Increased safety for all patients with potential risk factors
